Designed to Perform and Excite

The **Vestalux V2** is a high-output, direct view linear outliner featuring Lumascope's UVGuard™ Technology. The linear offers best-in-class photometric performance, with over 1,200 lm from a 4' (1.2 m) RGBW, and over 2,400 lm from a white luminaire. With Vestalux V2 luminaires on your project, imagination is the only limit!

powersync®4

Intelligent Electronics For LED Luminaires

What is PowerSync®?

- » PowerSync was born from an industry need for simplified, contractor friendly installation without compromising dimming quality.
- » PowerSync supports industry standard protocols: 0-10V, ELV and DMX/RDM.
- » High resolution dimming to 0.1%.
- » Installation of PowerSync requires only standard wiring methods and materials.
- » PowerSync uses a single extra conductor to carry data - less copper, fewer connects vs. other manufacturers using standard control methods.
- » Consistent dimming performance, wiring and installation across all PowerSync luminaires, regardless of the incoming signal.
